Hacker Blocker

Trig Web Design, LLC

Inventors of the Hacker Blocker Cybersecurity System

Our Service

Hacker Blocker is a software and service that blocks over 700 million IPs around the world reported for cyber-attacks. Our software protects Windows servers, PCs and Virtual Machines, as well as Linux / Unix and LAMP stacks. Our CSOC monitors traffic, detects attacks and blocks them for all subscribers within minutes of that attack.

Our Mission

We provide solutions and services to our clients that are designed to protect them from hackers, spammers, ransomware servers and bot-nets from all over the world on their web servers, Windows-based computers and email servers.

Our Capabilities & Past Performance

- Automatic Endpoint Firewall Updating
- Cybersecurity Operations Center
- Website Intrusion Detection and Blocking
- Crowdsourced Firewall Blocklist Building
- Automatic Microsoft Windows Firewall Updating
- Advanced Web Development

The Hacker Blocker system automatically protects *all* clients from a *single* cyber-attack on one client. Our process:

- Detect cyber-attacks on clients servers
- Research attacking IP for abuse & CIDR
- Add attacking IP/CIDR to Master Blocklist
- All clients are updated via sFTP (Linux) or get automatic Rules updates every hour (Windows)

To
- Hackers
- Spammers
- Bad Bots
- Ransomware servers

- DDoS Attacks
- SQL Injections
- Virus Uploads
- Phishing & Malware

Experts in Internet and Network Systems

Web Hosting and Maintenance Experts

Certified in Hardware & Software

Our Clients are *Fiercely* Loyal—and we are to them

Client Portfolio

How Did a Web Design Company Get Into Cybersecurity?

Web development doesn't stop when the site is finished. Our services include web design, web hosting, website maintenance and marketing. Website attacks, mainly from overseas, can cause significant reductions in site speed and security. To provide the highest quality of service, we started blocking these attacks in 2016, and today we have evolved our services to protect all portals into a company or agency. Websites, Email, Exchange Servers, Windows Servers, Virtual Machines and even Laptops can now enjoy the protection Hacker Blocker provides.

As our client base grows, so does our detection network. When one client is attacked, all clients are protected instantly. Together, we can put an end to the seemingly endless barrage of cyber-attacks on our country, and stop these criminals from profiting on our public trust. **The More They Attack Us, The Stronger We Become.**
